

Pollution Prevention Services provides confidential, non-regulatory technical assistance at no cost to Iowa businesses and industries, Resource Conservation & Recovery Act (RCRA) large quantity generators, Toxics Release Inventory (TRI) reporters, institutions and government agencies with 100 or more employees. Our services can save your organization money, all while improving your environmental performance.

POLLUTION PREVENTION SERVICES

How we can help

Assistance and Assessments

Pollution Prevention Services offers our customers focused assessments with in-depth recommendations and plant-wide assessments that provide an overview of potential plant-wide pollution prevention opportunities a company should consider. We also provide technical assistance and brief on-site visits, where opportunities are noted for further assistance from us. As a result of our assessments, our team of experts will develop a customized report containing cost-effective waste reduction and pollution prevention recommendations. We continue to work with our clients beyond the report and offer implementation assistance provided by our team of experts or by a pollution prevention intern.

Pollution Prevention Intern Program

The Pollution Prevention Intern Program is a unique partnership among government, academia and business. Through a competitive process, agencies and companies can obtain a college graduate or upper-level undergraduate student to identify, evaluate and implement projects in their facilities. The students receive one week of pollution prevention systems training and assist their host companies during an 11-week summer internship.

Environmental Management Systems (EMS)

An Environmental Management System (EMS) is an organized and formal approach to managing environmental issues within an organization. An EMS is based on a continual improvement process that helps an organization systematically manage its environmental impact. An EMS can help you improve your environmental performance, save your organization money and make it more competitive, boost your public image, help you retain and recruit employees, and help you better manage your environmental legal obligations. Pollution Prevention Services can assist you with the development of your EMS as well as identify potential improvement projects and help you with the implementation of them.

Workshops, Training and Classes

Pollution Prevention Services uses regional locations as well as on-site facilities for conducting education workshops. These workshops allow us to transfer tools and technology and new source reduction ideas. We also offer training that is more site-specific and will be held only at the requesting facility. We use an informal learning approach, which allows us to have an open forum for discussing details that may only apply to you.

We are partnering with the University of Iowa and Iowa State University Colleges of Engineering in conducting sustainable systems and sustainable engineering courses for today's students. The students will enter the workforce with sustainability principles in mind, allowing us to further our programs.
